introduction partial commutative monoids continuous dimension scales espaliers classes of espaliers bibliography index

the multiplier ideals of an ideal in a regular local ring form a family of ideals parameterized by non negative rational numbers as the rational number increases the corresponding multiplier ideal remains unchanged until at some point it gets strictly smaller a rational number where this kind of diminishing occurs is called a jumping number of the ideal in this manuscript the author gives an explicit formula for the jumping numbers of a simple complete ideal in a two dimensional regular local ring in particular he obtains a formula for the jumping numbers of an analytically irreducible plane curve he then shows that the jumping numbers determine the equisingularity class of the curve

in particular for  $b \geq 1$  and  $\lambda \geq 0$  we find a sharp condition on  $h$  such that the origin is a removable singularity for all non negative solutions of eqref one thus addressing an open question of vázquez and véron
